MICROFILMING PROJECT

PURPOSE

To microfilm Birth Index Cards for Civil Defense purposes, that is, to store the microfilm in a secluded area free from "zone zero" and if disaster occurs to immediately set up a duplicate index card file using photographic paper as the card, the card image made from the microfilm.

The cards were filmed rather than the certificate because:

(1) Index cards are more adaptable to the automatic feed and all the essential data are shown thereon.

(2) Index cards would take approximately 1/3 the microfilm, the index card being $2\frac{1}{4}$" as against the certificate measuring $7\frac{1}{4}$".

(3) The issuance of certified copies can continue as usual.

(4) Microfilm reference by soundex is faster in that 10 years may be found together.

PROCEDURAL DATA

It has been determined that on 100 feet of microfilm approximately 8400 $2\frac{1}{4}$ x 3" index card images can be taken at a reduction of 23 to 1.

To average five microdex points (sections) for each 100 feet of microfilm there will be approximately 1600 $2\frac{1}{4}$ x 3" birth index cards between microdex points.

Also, to keep card handling to a minimum, four microdex guides (stops) will be inserted within each drawer covering 1 reel of film. By approximation, there will be on the average of 3/4 of a drawer microfilmed on each 100 feet of film (1 reel). The cards will be fed automatically widthwise allowing more cards to be microfilmed per reel.
